## Digital Single Input Module

### Description

DI-9300E Digital Single Input Module is used for receiving normally open or normally closed switch signal (dry contact), and transmitting the signal to fire alarm control panel (FACP) through signaling line circuit (SLC) loop to FACP. Then the FACP generates active message and displays the address of the module. By cable monitoring, the module can transmit the fault message to the FACP when the input loop is broken. And the FACP will display the address of the module.

### Features and Benefits

- Input port monitored with 4.7KΩ EOLR
- Normally open or normally closed contact acceptable
- Electronically addressed. Address can be modified in field
- Built-in microprocessor and AD sampling technology
- Rail mount or surface mount

### Certificates and Compliance

- Standards: EN 54-18:2005
- Certifications: CE LPCB
- WEEE & RoHS Compliant

### Installation

The installation points of the module are shown below, Wall-mount and Rail-mount. DIN-35mm rail is applicable.

### Terminals and Recommended Cabling

(Z1, Z2) IN & OUT: Loop (SLC) connection, In & Out, non-polarized  
 I, G: Contact input, non-polarized  
 Recommended Cabling: Minimum 1.0mm<sup>2</sup>, Maximum 2.0mm<sup>2</sup> twisted pair cable, and subject to local codes

## Application

The module is electronically programmable. Set the address and input parameter by handheld programmer P-9910B. The input can be N/O (default) or N/C.

Parameter (Function-3)	Input Mode
1	Normally-Closed
Other numbers	Normally-Open

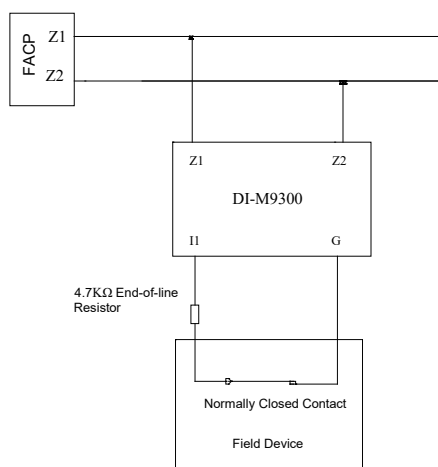

The operation can be done either through the clips-link to the terminals (Z1&Z2), or through the earphone-link to the 3.5mm code-jack.

Below figures show the connections of the module. A 1-Watt 4k7 End of Line Resistor is required.

Normally-open input

Normally-closed input
