DC-9101E
Conventional Combination Heat Photoelectric Smoke Detector

Description

DC-9101E Conventional Combined Heat and Photoelectric Smoke Detector integrates photoelectric detection, fixed temperature and rate of rise detection technology. The smoke sensor and heat sensor are integrated in mechanism and circuitry structure, provide wide range of application, to detect more types of fire conditions like black smoke with small particles and alcohol flame.
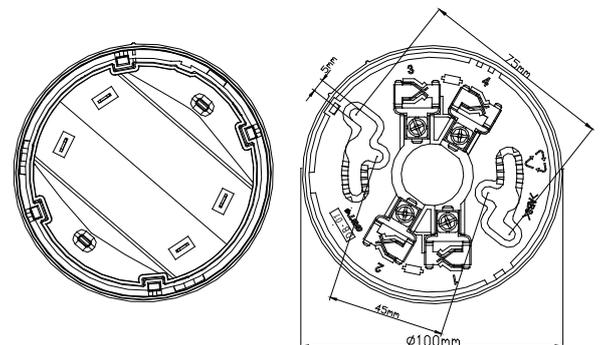

Features and Benefits

- Drift compensation enables strong environmental adaptability
- Self-diagnostic
- Reed switch test
- Dirty chamber checking
- Fire LED allows 360° viewing
- Possible to switch off polling LED
- Remote indicator output
- 2 levels smoke sensitivities programmable
- Level 1 complies with EN 54-7. Heat part complies with EN 54-5

Certificates and Compliance

- Standards: EN 54-5, EN 54-7
- Certifications: LPCB

Terminals and Installation Holes

Below figures show the detector bottom and terminals of the base.

There are four terminals with marks on the base.

1: Positive IN
2: Positive OUT
3: Negative IN and OUT
2: Positive terminal of remote indicator
4: Negative terminal of remote indicator

The base can be installed onto standard European embedded back box, with hole-distance 45mm to 75mm.

Recommended Cabling

1.0mm^2 or above fire cable is recommended，but subject to local codes.

Application

Detection sensitivities can be set through P-9910B programmer. Below table shows relative codes for sensitivity levels and working modes. Factory defaults at Level 1 + Rate of Rise.
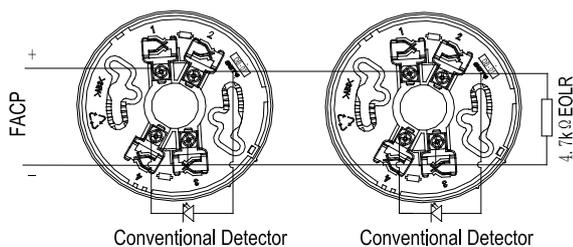

Parameter	Smoke Sensitivity	Heat Part	Polling LED Status
1(default)	1	Rate of Rise	ON
2	2	Rate of Rise	ON
129	1	Rate of Rise	OFF
130	2	Rate of Rise	OFF

When the detector connects with conventional fire alarm control panel or addressable zone monitor unit from GST, and if DP-9907 Active End of Line Unit is connected to the end of output loop, DB-01D base should be used.
